COLOR CHART

INTRO

For more than 80 years, CIRANOVA's knowledge and expertise has established our reputation in the field of treatment and maintenance products for wooden floors, furniture and other wooden objects. Thanks to the complete and unique range of colours, reactive stains, lacquers, oils, waxes and maintenance products. Ciranova is a leading supplier for the parquet layer and industrial parquet supplier. Get inspired by the color range of our stains and oils to create your own exceptional finishes.

INDOOR

► REACTIVE STAIN (p4-5)

Reactive stain is an ageing stain based on natural and chemical dyes. Reactive stains give the wood a unique aged aspect by reacting with the tannin in the wood. Reactive stains are specially fit for the ageing of wood containing tannin such as oak and pine. After drying the reactive stain can be finished with oil, or wax. Different colours are available to give a rustic aspect.

► AQUAVINTAGE 2C – NEW (p6)

Aquavintage 2C is a new water based reactive stain, specially fit for ageing the wood in a simple and fast way. Aquavintage 2C is a positive stain, which accentuates the wood grain and gives depth and a warm unique texture to the wood. Different colors are available to give the wood an authentic aspect

► VINTAGE (p7)

Vintage stains are based on natural and chemical dyes. Some of them are mixed with lime and special pigments to have the ceruse or cheeseboard effect. Vintage stains give the wood a weathered 'vintage' look. With Vintage stains you can have very nice and unique finishes in only 1 coat. A variety of colours is available for a totally unique appearance.

► AQUAPAD (p8-9)

Aquapad is a waterborne wood stain to colour all kind of wood for interior use. Aquapad gives the wood a uniform appearance and makes the woodgrain more prominent. Aquapad is specially made to apply with a buffing machine. Afterwards, Aquapad can be finished with an oil or with a waterbased lacquer. To finish with a waterbased lacquer, a hardener needs to be added in the Aquapad.

► UN1CO (p10-11)

UN1CO is a 2 component, 1-coat oil from the newest generation using renewable natural oils. Thanks to its special technology, you only need one coat to finish your parquet. The combination of the oil with the hardener results in a fast drying and excellent chemical and mechanical resistant finish.

► HARDWAXOIL (p12-13)

Fast drying flooring oil suitable for oil finishing of wooden floors. Good filling properties, good chemical and mechanical resistance.

► HARDWAXOIL MAGIC (p14)

Modified Flooring Oil for finishing wooden floors. Good filling properties, natural colour. Very good chemical and mechanical resistance. Matt appearance with no sheen. Optional UA Hardener for increased durability.

► QUALITY WAX & LIMING WAX (p15)

A traditional wax made with natural raw materials to wax furniture, beams, doors etc.

► TRENDY FINISHES (p16)

Unique finishes made by combining our stains and oils.

OUTDOOR

► DECKING OIL (p17)

DECKING OIL is an impregnation oil for the protection and maintenance of all exterior wood. Decking oil has a built-in UV blocker, which slows down discolouration of the wood. Decking oil feeds and protects the wood and provides a water resistant effect. DECKING OIL is suitable for all wooden decks, outdoor furniture and sidings.

► ECOPROTECTOR (p18)

Ecoprotector is a waterbased finish used to protect outdoor wood such as resinous wood, exotic wood and European hardwoods. Ecoprotector doesn't form a film but penetrates into the wood. Ecoprotector provides a nurturing protection which doesn't flake and which is easy to maintain.

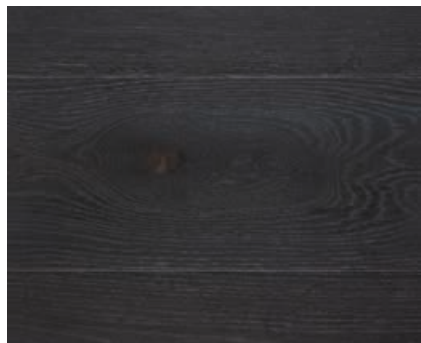

USER TIPS

Stains and oils should always be tested before the final surface is treated. Used sanding grain, type of wood, temperature, humidity may affect the final color. Even though the stain was applied perfectly following the known procedure there can still be variations within the same floor. That's due to the fact that even the same wood specie can contain a different amount of tannin or organic content depending where they grew up! So tone and reaction differences are perfectly normal when using reactive stains, pigment stains and oils. That's what makes the floors so unique and beautiful!
